EDUCATION

BMS Institute of Technology and Management **Cumulative GPA: 8.94/10.0**
Bachelor of Engineering, Computer Science and Engineering Oct 2024 - May 2028 (Expected)
Roles: Tech Community Builder - Institution's Innovation Council (IIC) (grow and maintain the student tech community, run activities, and create opportunities for student engagement)
Technical Associate - GenAI Club & Alterino (Web Dev Club)
Marketing Lead - Coding Club BMSIT.

PROJECTS

CARDIAC BIOMARKER ML SYSTEM (Collaboration with Professors) | GitHub Link
- Built an end-to-end ML pipeline for cardiac biomarker classification from biosensor data, modeling fluorescence and electrochemical signals to detect biomarkers at picomolar levels.
- Trained and evaluated ML models using Python and Scikit-learn, focusing on feature engineering and model validation.
- Deployed a real-time prediction web app on Render for sensor-based diagnostics.

UPI-RISK-SENTINEL | GitHub Link
- Built a fraud detection and transaction monitoring platform for digital payments, combining a FastAPI backend with Streamlit dashboards for live investigation.
- Implemented behavioral risk scoring, fraud-ring detection, and graph-based analytics to flag suspicious UPI-style transactions using sender/receiver relationships and velocity signals.
- Added GNN-style suspicious node detection and explainability output, plus heatmap and alert views, so analysts can score and investigate risky activity in real time.

CHESSCOACH | GitHub Link
- Built a local chess analysis app that imports a player's Chess.com games, runs Stockfish analysis on every move, and grades moves against best-line suggestions.
- Generated LLM-based coaching reports explaining plans, pawn structure, piece quality, and recurring themes at key moments, with support for local and hosted models (Ollama, Claude, Gemini).

Namma Yatri Marketplace Performance Analysis (Tableau) | Dashboard Link
- Analyzed ward-level conversion, cancellations, and pricing dynamics; identified driver quote acceptance and trip distance as primary drivers of conversion, and uncovered supply-demand inefficiencies impacting performance.

ACTIVITIES

Open Source Contribution:
- Contributed to NixOS/nix-security-tracker: fixed caching-related crashes, improved view reliability, and added test coverage | GitHub PR Link
- Contributed to DSKit (ML Library): added data validation, improved model validation, and handled imbalanced datasets | GitHub PR Link
- Contributed to pico-sdl: added a --version flag to pico-lua and added hex integer color support. GitHub PR Link

TECHNICAL SKILLS

- **Languages:** Python, C++, JavaScript, SQL
- **ML:** Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn
- **Data Science:** Data Cleaning & Preprocessing, Feature Engineering, EDA, Supervised Learning, Model Evaluation, ETL Pipelines, Data Modeling
- **Tools:** Git, GitHub, Supabase, Databricks
- **Analytics:** KPI Design, A/B Testing, Dashboarding (Tableau)
- **Web:** HTML, CSS, Tailwind CSS, Flask, Django, Node JS, Next JS
- **Core CS:** Data Structures, Algorithms, Object-Oriented Programming
