SUMMARY

Computer Science undergraduate (GPA 8.94/10) building production backend and agentic AI systems. Backend & agentic engineer at Fintrix (fintech startup, 1,000+ learners); open-source contributor to NixOS, DSKit and pico-sdl.

EXPERIENCE

Software Engineering Intern | Fintrix *2026 – Present*

- Contribute to backend services and multi-step agentic workflows for Finny, an AI finance-learning assistant that integrates user portfolios, trade history, watchlists, and live market data to deliver context-aware responses.
- Develop and maintain API, database, and background-job components that connect financial data with LLM workflows, including context retrieval and conversation state management.
- Collaborate on testing, debugging, and improving service integrations to support reliable data flow across backend systems and AI-powered features.

OPEN SOURCE CONTRIBUTIONS

NixOS / nix-security-tracker | GitHub PR *Python, Django, PostgreSQL, Playwright*

- Diagnosed a race between suggestion listing and cache creation that crashed the list view with **RelatedObjectDoesNotExist** in the NixOS security tracker; filtered uncached suggestions out of the list and made the detail view return **404 instead of 500**.
- Fixed notification ordering so users never receive links to pages that aren't ready: moved notification dispatch into cache creation and **removed 1 redundant pgpubsub channel** and its worker config; added Playwright tests covering both fixes.

DSKit (ML library) | GitHub PR *Python, scikit-learn, imbalanced-learn, pytest*

- Added data validation to a data-science toolkit: **3 utilities** for schema checks, duplicate analysis and dataset profiling, so bad data is caught before modeling.
- Upgraded model validation to cross-validation reporting **mean/std across 7 metrics** (plus ROC-AUC and PR-AUC) and built an imbalance module (class weights, SMOTE, threshold tuning); shipped with **34 passing tests and 3 demos**.

pico-sdl | GitHub PR *Lua, Shell, Make*

- Added a **--version flag** to the pico-lua CLI: prints the version and exits with code 0 without initializing SDL or Lua.
- Iterated through **2 maintainer review rounds** (hardcoded version, matched codebase shell style) and added a strict Makefile test that fails the build on wrong output; also added hex integer color support.

PROJECTS

Unlearn-LLM | GitHub *Python, PyTorch, Hugging Face, QLoRA, Streamlit*

- Implemented Microsoft Research's approximate-unlearning method (Reinforce, Anchor Translation, Relabeling, Unlearning) so an LLM forgets a target corpus without full retraining; ran on phi-2 (4-bit QLoRA, T4 GPU) and a CPU-first GPT-2 CLI.
- Evaluated 4 alpha configurations across 52 prompts on forgetting, generic-replacement and retention metrics; added failure analysis, Streamlit visualization, unit tests and GitHub Actions CI.

UPI Risk Sentinel | GitHub *FastAPI, Streamlit, scikit-learn, PyTorch, NetworkX, SHAP*

- Built a UPI fraud-monitoring platform that scores live transactions through a FastAPI API, combining Isolation Forest, logistic regression and LSTM models with velocity, device and location risk signals.
- Shipped 9 monitoring views: fraud rings, transaction graphs, GNN-style suspicious-node detection, SHAP explainability, drift monitoring, heatmaps and alerts; PostgreSQL with automatic SQLite fallback.

ChessCoach | GitHub *React, FastAPI, SQLite, Stockfish, LLMs*

- Built a local-first AI chess coach (desktop + web) that imports Chess.com games, grades every move with Stockfish (MultiPV, up to 3 candidate lines) and detects key moments.
- Grounded LLM coaching (Ollama, Claude, Gemini with fallback) in 10+ deterministic board features (material, pawn structure, king safety, open files, weak squares) to cut hallucinated advice.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL
AI / GenAI: LLMs, Agentic Workflows, RAG, Prompt Engineering, Hugging Face, PyTorch, QLoRA, LLM Unlearning
ML / Data: Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, SHAP, Feature Engineering, EDA, Model Evaluation, ETL
Backend / Web: FastAPI, Django, REST APIs, React, Next.js, Tailwind CSS, PostgreSQL, SQLite, Supabase
Tools: Git, GitHub Actions, Docker, Databricks, Tableau, Pytest, Playwright
Core CS: Data Structures & Algorithms, OOP, DBMS

EDUCATION & LEADERSHIP

BMS Institute of Technology and Management, Bengaluru *Oct 2024 – May 2028 (Expected)*
B.E. Computer Science and Engineering Cumulative GPA: 8.94/10.0

- **Tech Community Builder**, Institution's Innovation Council (IIC): grow the student tech community and run activities.
- **Technical Associate**, GenAI Club & Alterino (Web Dev Club)
- **Marketing Lead**, Coding Club BMSIT.
